

## Application Note - Outdoor Sensor Light OMSL2B and OMSL2W

### 3-position switch mechanism

A 3-position switch mechanism **cannot be used** with this sensor light to provide the usual SENSOR / OFF / ON functions. This is because the lights and the sensor are built into the same unit, rather than being separate (sensor + external load).

To achieve Auto / Manual ON / Manual OFF control, two separate switches must be installed and wired as shown in the diagram below.

- Switch A: Manual Override ON
- Switch B: Sensor controlled / Override OFF
